Guwahati, Assam, India

SUMMARY

Full-stack developer building real-time systems, production web platforms (auth, RBAC, queued jobs), and AI-powered features, from database design to 3D frontends, with published npm packages.

SKILLS

Languages
- JavaScript, TypeScript, Python

Full-Stack Development
- React, React Router, Next.js, Tailwind CSS, Three.js, Node.js, Hono, Express, Flask, Socket.IO, PostgreSQL, MongoDB, Drizzle, Prisma, Better Auth, Auth.js

AI & Machine Learning
- YOLOv5/v8, OpenCV, Intel RealSense, pandas, NumPy, scikit-learn, Matplotlib, Ollama, LangChain, LangGraph

Tools & DevOps
- Git, GitHub, GitHub Actions, Docker, Docker Compose, pnpm, Turborepo, Vitest, Playwright, Electron.js, React Native, MV3, AWS S3 SDK, nginx

ACHIEVEMENTS

GATE CS 2026
- Achieved All India Rank 1969 (top 1%), score: 649/1000

INTERESTS

Chess
- Achieved a peak rating of 1950 (top 0.5%) in Chess.com Rapid

EDUCATION

B.Tech in Computer Science & Engineering *09/2023 – Present*
Assam Engineering College
- CGPA: 8.27/10 (through 6th semester)
- Expected graduation: 2027

EXPERIENCE

Web Wing Coordinator *08/2025 – 07/2026*
Coding Club, Assam Engineering College
- Developed CodeWar 7.0, an interactive 3D event site (Next.js, Three.js, R3F, Tailwind CSS) featuring scripted camera-flight navigation and procedural camera motion
- Optimized performance via adaptive rendering across mobile, tablet, and desktop, scaling particle count (100 to 250), pixel ratio, shadows, and post-processing, sustaining 40–50 FPS on low-end devices
- Designed a server-gated countdown API for scheduled problem-statement release, handling ~50 concurrent users during release and preventing early access
- Mentored juniors through 3 structured web-development and DSA sessions

Full-Stack & Edge Systems Intern *07/2025*
Technology Innovation Hub, IIT Guwahati
- Built ODStream, a real-time multi-user object detection platform (React, Flask, Socket.IO, YOLOv5/v8) streaming live video over LAN with synchronized camera/recording state across a distributed multi-client system via WebSockets
- Engineered a pluggable camera layer supporting local webcams and remote MJPEG/HTTP sources with threaded frame buffering; implemented 3-frame stability filtering for detection logging, reducing false-positive noise
- Benchmarked 12–14 FPS (CPU) and 15–18 FPS (GPU) on desktop inference
- Ported the system to a Jetson Nano edge backend (Intel RealSense SDK) for on-device inference, enabling source-switching via a unified API

PROJECTS

AECFolio, *Student Information System & CV Generator* *04/2026*
- Developed a full-stack student-records platform (Turborepo monorepo with Hono API, React Router frontend, background PDF-generation worker) with faculty-verified records and role-based access control
- Designed a normalized PostgreSQL schema (Drizzle ORM) with soft deletes and comprehensive audit logging for critical actions (claim review, cohort promotion, user administration) across students, faculty, and student claims
- Built a bulk CV export pipeline with API-coordinated job tracking, progress reporting, and a concurrency-limited Puppeteer worker, generating 500 CVs in 17.9s
- Implemented a bulk student-import endpoint with fuzzy column-matching, per-row validation, and partial-failure handling

lotl, *Markdown to PDF Node.js CLI Tool* *08/2025*
- Published an npm package (4 versions) for converting Markdown into themed, print-ready PDFs in under 2 seconds, usable both as a CLI and as a programmatic Node.js API
- Automated npm publishing via GitHub Actions, triggered on version tags, with batch/recursive conversion and configurable themes, margins, titles, and page formats, gaining 250+ organic downloads
